

Member 1: Natasha (Catalog & Administrative Communications)

Assigned Focus: Product discovery, customer tables, and backend notification services.

- **Pages to Develop (3):**
 - `index.php` (Homepage / Landing Page)
 - `browse.php` (Product Listing & Collection Category page)
 - `admin_notifications.php` & `admin_deliveries.php` (Admin Customer Management / Notification dashboard)
- **Features to Implement (3):**
 - **Product Search & Multi-Criteria Filtering Engine:** Client-side JavaScript combined with backend PHP queries to look up shoes and filter by category/price tier.
 - **Admin Customer Management Suite:** A secure dashboard view that lists registered user data dynamically from MySQL with a functioning data-purge ("Delete User") tool.
 - **Broadcast Communication Service:** A text-routing script enabling an admin to dispatch parcel/marketing message updates directly into the system logs.

Member 2: Nabilah (Authentication, Profile Control & Stock Analytics)

Assigned Focus: System gatekeeping, security boundaries, and inventory management visibility.

- **Pages to Develop (3):**
 - `register.php` (User Signup Interface)
 - `login.php` (User Authenticator Interface)
 - `user_dashboard.php` (Customer Hub) OR `admin_dashboard.php` (Inventory Status Center)
- **Features to Implement (3):**
 - **Dual-Role Registration Engine:** Input formatting and PHP validation engine handling customer sign-ups safely into the database.
 - **Role-Based Access Controller (RBAC):** PHP Session initialization tracking whether a user is a customer or an admin, blocking unauthorized folder access accordingly.
 - **Dynamic Reward & Status Tracker:** Logic that queries total user-purchases to calculate and render cumulative customer loyalty reward points dynamically.

Member 3: Afiq (State Preservation, Storage & Inventory Tuning)

Assigned Focus: Transient user data selection arrays and direct item catalog manipulations.

- **Pages to Develop (3):**
 - `cart.php` (Active Shopping Cart overview)
 - `wishlist.php` (Saved Items archive)
 - `admin_product.php` (Admin Edit Catalog / Add Product workflow)
- **Features to Implement (3):**
 - **Dynamic Cart Calculation Mechanism:** Real-time summary scripts tracking modifications to item item tallies, rendering exact updates to product sub-totals and costs via JavaScript or AJAX.
 - **Wishlist Preservation Hook:** State management feature permitting items to be hot-swapped over from a customer's persistent database archive into the live cart queue.
 - **Catalog Mutator Engine (CRUD Admin):** Full PHP backend form controller processing product table modifications (Inserting new stock, altering price listings, uploading filenames) safely.

Member 4: Solihin (Transactional Workflows & Fulfillment Lifecycle)

Assigned Focus: Capturing customer parameters, financial verification setups, and processing confirmation statements.

- **Pages to Develop (3):**
 - `checkout.php` (Shipping Destination & Parameter logging page)
 - `payment.php` (Transaction Gate selection panel)
 - `confirmation.php` (Receipt invoice output window)
- **Features to Implement (3):**
 - **Shipping Information Validator:** Client-side JavaScript coupled with backend sanity-checks ensuring telephone inputs and regional mailing parameters are configured without empty strings.
 - **Transaction Routine Simulator:** Functional routing script executing mock checks over credit choices, banking configurations, or alternative payment structures.
 - **Order Commit Pipeline:** Transaction operation compiling active cart contents, decrementing available quantities safely from the inventory, and generating a distinct transaction invoice record upon payment execution.
